

Dear Representative,

It's November 4, 2008. You have spent millions of dollars and talked yourself hoarse campaigning tirelessly throughout your district for months. Pre-election polls and exit polls show you have a comfortable lead, but...

THE ELECTRONIC VOTING MACHINES SAY YOU LOST!?

When the results are all in, it becomes clear that thousands of votes in your race failed to be recorded by the voting machines and your opponent's margin of victory is a few hundred votes. Those unrecorded votes are gone forever — vanished into cyberspace without a trace!

DON'T LET THIS HAPPEN TO YOU!

Computer scientists and public policy experts across the political spectrum are virtually unanimous in agreement that the most effective way to secure our elections is with a paper record of each vote, verified directly by the voter before it is cast, with rigorous audits to ensure accuracy.

The Voter Confidence & Increased Accessibility Act of 2007 (HR811) will:

- Require that all votes cast in federal elections have a paper record that each voter can verify before it becomes the official record of his/her vote
- Ensure the accuracy of the electronic results by requiring audits of the paper records

Please vote YES on HR811

THANK YOU for your public service and for your commitment to democracy!
